

Wipro BLUE powered by IBM Edge Application Manager

Intelligent Edge Application
lifecycle management

Introduction

IBM Edge Application Manager is an intelligent and flexible platform that provides autonomous management for edge computing. A single administrator can manage the scale, variability and rate of change of application environments across tens of thousands of end points simultaneously.

Wipro BLUE, powered by IBM Edge Application Manager is a full-lifecycle edge environment that helps you to safely create, deploy, run, monitor, maintain, and scale business logic and analytics applications at the edge. It can run anywhere and manage workloads on virtually any edge endpoint, including servers, gateways and devices. It gives you the choice and flexibility to extend from any public or private cloud to any edge server or device. This solution solves operational and management complexity faced by enterprises.

Key Takeaways

Consistent visibility, control and automation for managing and scaling edge workloads

Industry's first autonomous application workload lifecycle management edge offering with edge-native programming model

Firewall ready, prevents common attacks, encrypted & signed messages, container tampering, and update verification

Autonomous edge node and management hub orchestration

Improves business outcomes in real-time with resilience and security by placing enterprise business logic and AI applications closer to where data is created

Key Benefits

Faster insights and actions

Continuous operations

Improved data security and control

Features

Autonomous EAM configuration

Edge node orchestration for on-premise/hybrid cloud

Easy to manage all day-1 and day-2 operations

Autonomous application workload lifecycle management

Runs on Red Hat OpenShift cluster hosted on any private/public cloud

Out-of-the-box security designed for decentralized deployment

Seamless workload mobility for edge workloads virtually across any cloud, any edge gateway and any device
